Contributions concerning current research	
Flexible, robust, and efficient human speech recognition <i>Louis C.W. Pols</i>	1
A preliminary study about robust speech recognition for a robotics application <i>Xue Wang and Louis C.W. Pols</i>	11
Word-level prosodical marking of consonant duration and spectral balance <i>R.J.J.H. van Son and Jan P.H. van Santen</i>	21
Functional optimality theory <i>Paul Boersma</i>	37
How we learn variation, optionality, and probability <i>Paul Boersma</i>	43
Inventories in functional phonology <i>Paul Boersma</i>	59
Number and duration of spoken utterances of deaf and normally hearing children between twelve and eighteen months <i>Ineke van den Dikkenberg-Pot and Florian J. Koopmans-van Beinum</i>	91
Prominence in read aloud sentences, as marked by listeners and classified automatically <i>Barbertje M. Streefkerk, Louis C.W. Pols, and Louis F.M. ten Bosch</i>	101
Category ART: A variation on adaptive resonance theory neural networks <i>David Weenink</i>	117
Acoustic correlates of prominence: A design for research <i>Barbertje M. Streefkerk</i>	131
Formant frequencies of Dutch vowels in tracheoesophageal speech <i>Corina J. van As, Annemieke M.A. van Ravesteijn, Florian J. Koopmans- van Beinum and Frans J.M. Hilgers</i>	143
Summaries of Ph.D. theses defended in 1997	
Incorporating knowledge on segmental duration in HMM-based continuous speech recognition <i>Xue Wang</i>	155
Publications in 1996 and 1997	159
