CONTENTS

Editorial
List of Personnel
Contributions concerning current research
Flexible, robust, and efficient human speech recognition
   Louis C.W. Pols

A preliminary study about robust speech recognition for a robotics application
   Xue Wang and Louis C.W. Pols

Word-level prosodical marking of consonant duration and spectral balance
   R.J.J.H. van Son and Jan P.H. van Santen

Functional optimality theory
   Paul Boersma

How we learn variation, optionality, and probability
   Paul Boersma

Inventories in functional phonology
   Paul Boersma

Number and duration of spoken utterances of deaf and normally hearing children between twelve and eighteen months
   Ineke van den Dikkenberg-Pot and Florien J. Koopmans-van Beinum

Prominence in read aloud sentences, as marked by listeners and classified automatically
   Barbertje M. Streefkerk, Louis C.W. Pols, and Louis F.M. ten Bosch

Category ART: A variation on adaptive resonance theory neural networks
   David Weenink

Acoustic correlates of prominence: A design for research
   Barbertje M. Streefkerk

Formant frequencies of Dutch vowels in tracheoesophageal speech
   Corina J. van As, Annemieke M.A. van Ravesteijn, Florien J. Koopmans-van Beinum and Frans J.M. Hilgers

Summaries of Ph.D. theses defended in 1997
Incorporating knowledge on segmental duration in HMM-based continuous speech recognition
   Xue Wang

Publications in 1996 and 1997
