INTRODUCTION

In this Proceedings 10 of the Institute of Phonetic Sciences of the University of Amsterdam we present seven contributions concerning current research projects. All these papers represent one main research field: The perceptual and physical description of variation and invariance in speech.

For your information we have included a list of personnel as well as a list of publications since Proceedings 9.

Anybody who wants to comment upon this volume is kindly invited to do so. Those of you interested in receiving more information about the activities of our institute, please contact us.

We recently produced an "Institute's Profile" with up-to-date information about our institute and our research activities. This report is available upon request.

All correspondence, including requests to be put on our mailing list, may be sent to:
