- Controlling TTS systems
- Assignment
- Bibliography

Copyright ©2007-2008 R.J.J.H. van Son, GNU General Public License [FSF(1991)]

Introduction

Uses of speech synthesis by computer

- Read aloud existing text, eg, news, email and stories
- Communicate volatile data as speech, eg, weather reports, query results
- The computer part of interactive dialogs

The building block is a Text-to-Speech system that can handle standard text with a Speech Synthesis (XML) markup. The TTS system has to be able to generate acceptable speech from plain text, but can improve the quality using the markup tags

Computer Speech: Generating the sound

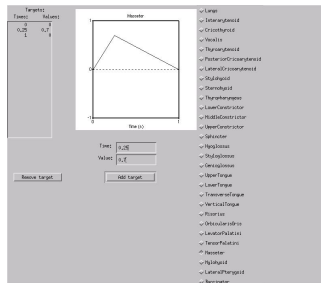

Speech Synthesizers can be classified on the way they generate speech sounds. This determines the type, and amount, of data that have to be collected.

Speech Synthesis

- Articulatory models
- Rules (formant synthesis)
- Diphone concatenation
- Unit selection

Computer Speech: Articulatory models

Characteristics (/εṛə/ from Praat) [Boersma(1998)]

- Quantitative Source-Filter model of vocal tract
- Solve Navier-Stokes equations for air-flow
- Needs hard-to-get articulatory data

Computer Speech: Rule, or formant, based synthesis

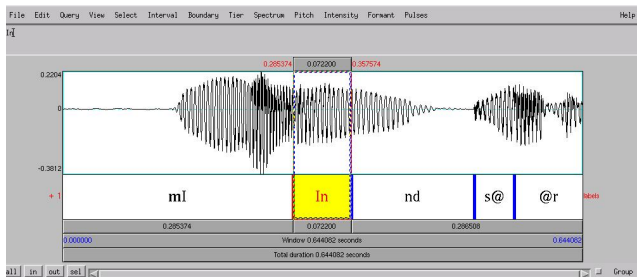

Klatt synthesizer [Sproat(), SRL()]

Characteristics (YorkTalk [Möhler(2005)])

- Recreate sounds using source and resonances
- Model formant tracks by rules
- Endless tuning, no data driven modelling possible

Computer Speech: Diphone synthesis

Characteristics (Spengi, Philips/IPO [Möhler(2005)])

- Concatenative synthesis: Glue phoneme-phoneme transitions
- Good quality, but requires all phoneme combinations to be present
- Sound encoding must allow intonation changes

Computer Speech: Nextens diphone synthesis

'Nederlandse Extensie voor Tekst naar Spraak' or 'Dutch Extension for Text to Speech' [example](#)

Nextens runs on top of Festival [Nextens(2003), Festvox(2005)]

- New Dutch voices in Festival
- Nextens GUI (io, commandline in Festival)
- Available for non-commercial use (*not* Open Source)
- Developed at the Radboud University and the University of Tilburg (Joop Kerkhof, Erwin Marsi, and others)

Computer Speech: Non-uniform unit selection

Generalize diphone synthesis to use larger, non-uniform, units like:
diphones, multiphones (clusters), demi-syllables, syllables, words,
and short phrases

Characteristics ([Festival](#) [Black and Lenzo(2003a)])

- Requires large annotated speech corpora (\sim GByte range)
- Corpus must be well annotated and searchable
- Efficient statistical search algorithms to optimize unit selection based on prosody and concatenation costs
- More speech in corpus \Rightarrow Better synthesis
- But also \Rightarrow More work to find the best combination

Computer Speech: Text-to-Speech

Text in Speech out: Processing “steps”

- Text normalization
- Grapheme Phoneme conversion
- Accent placement
- Duration generation
- Intonation generation
- Speech Generation

Text preprocessing: Normalize texts

Text should contain only pronounceable tokens

Grapheme to Phoneme conversion: By dictionary and rules

Tokenize the text and look up the words in a pronunciation dictionary.
If not found, use rules

- Dictionary entries: ("dictionary" nil (d ih1 k sh ax n eh1 r iy0))
- Rules: (LC [alpha] RC => beta)
 - (# [c h] r => k) "ch" word initially in English
 - (# [c h] => ch) "ch" word initially in English
 - ([c] => k) default rule for "c"

After all words have been converted, there is a second pass to catch changes at word boundaries and general effects of running speech

Morphological decomposition: Out-of-Vocabulary words

Compound words and other words not in the dictionary are common

- Compound words are common in many languages, eg, German, Dutch, Finnish, Turkish
- Compound word consist of lexical words that are connected with infixes, eg, *-s-* and surrounded by affixes, eg, *a-*, *in-*, *-ed*
- Compounding or affixes can change the pronunciation and orthography of a word component, eg, *Kunst* → *Künst+ler*)
- Parse complex words with a statistical weighted finite-state transducer (WFST) [Möbius(1998)]

Morphological decomposition: German examples

Unerfindlichkeitsunterstellung “allegation of incomprehensibility”

WFST states: **START PREFIX ROOT INFIX SUFFIX END**

German decompositions [Möbius(1998)]

- *gener+ator* “generator”
- *honor+ar* “fee”
- *Schwind+sucht* “consumption”
- *Arbeit+s+amt* “employment agency”
- *Sonne+n+schein* “sunshine”
- *Un+er+find+lich+keit+s+unter+stel+lung* “allegation of incomprehensibility”

Morphological decomposition: Decomposition

| noun forming prefixes | | | | | noun forming suffixes | | | | |
|-----------------------|------|------|----|--------|-----------------------|-------|------|----|--------|
| | N | Ftyp | n1 | P | | N | Ftyp | n1 | P |

| ent- | 13007 | 200 | 18 | 0.0014 | -isier | 1019 | 75 | 7 | 0.0069 |
| ver- | 53899 | 930 | 71 | 0.0013 | | | | | |
| dar- | 1071 | 6 | 1 | 0.0009 | | | | | |

Use a dictionary and include a morphological compound list with pronunciations. [Möbius(1998)]

Lexical stress and sentence accent: Prominence

Some words are more prominent than others. They are:

- Accented, i.e. carry a pitch movement
- Longer
- Louder
- Less reduced

Prominence is determined by

- Word type, function words are almost never prominent
- Word frequency, rare words are prominent more often
- New information is prominent, given is not
- Not too many prominent words in a row

There are rules for assigning prominence, but they need good POS tagging. Just accenting every content words works too

Lexical stress and sentence accent: Syllable stress

Some syllables are more prominent than others. They are:

- Longer
- Louder
- Less reduced

Syllable stress is determined by

- The lexicon or language (lexical/fixed stress positions)
- Syllable weight, “heavy” syllables are stressed
- No stressed syllables in a row
- Informative syllables are stressed

Mostly, you can get away with either the lexicon, or fixed positions. Syllable stress shifts in compound words. Morphological decomposition gives rules for these shifts

Lexical stress and sentence accent: Phrase boundaries

Intonation covers utterances of a few words at a time (around 5-7).
Breaking up sentences at acceptable places is difficult

- Use punctuation
- Guess boundaries on POS tags (HMM style)
- Do a partial syntactic parse and use phrases

In general, it is difficult to go beyond punctuation and some simple heuristics without syntactic parsing

Duration

Phoneme duration is determined by:

- Phoneme identity
- Surrounding phonemes
- Sentence accent/prominence
- Syllable stress
- Syllable length and position (Onset, Coda)
- Word length
- Phrase/sentence boundary position
- ...

These factors are used to construct statistical models from annotated speech corpora. Golden standard is Correlation and Regression Trees (CART). But many other statistical methods are used

Intonation

With the durations known, the pitch contour can be calculated

- Speaker and style determine the pitch range
- Give each accent a pitch movement shape and size
- Assign each vowel its target F_0 value
- Interpolate the values into a valid contour
- Assign each phoneme its F_0 values

Acoustic realization, PSOLA, MBROLA

Multi Band Excitation (Time Domain) Pitch Synchronous Overlap Add [MBROLA(2005)]

- Mark all pitch periods (blue pulses in *Praat*)
- Fixed periods for voiceless speech
- Window speech around each mark
- To lengthen/shorten a sound, reduplicate/delete periods
- To increase/decrease F_0 , shorten/lengthen times between periods
- Synthesize sound by summing windowed periods at their correct time position

Controlling TTS systems: XML standards for speech synthesis

VoiceXML: Control of web based dialog applications

- SRGS: Speech Recognition Grammar Specification
- SSML: Speech Synthesis ML
- CCXML: Call Control XML
- NLSML: Natural Language Semantics ML for the Speech Interface Framework
- SISR: Semantic Interpretation for Speech Recognition
- SCXML: State Chart XML, State Machine Notation for Control Abstraction
- PLS: Pronunciation Lexicon Specification
- ECMAScript/JavaScript

Controlling TTS systems: SSML

Speech Synthesis Markup Language

```
<speak version="1.0" xml:lang="en-GB">
  Hello, how are you?
  <prosody rate = "x-fast" >
    This sentence is spoken fast
  </prosody>
  <prosody pitch = "x-low">
    This sentence is spoken low pitch
  </prosody>
  <prosody pitch = "medium">
    This sentence is spoken medium pitch
  </prosody>
  <prosody pitch = "x-high">
    This sentence is spoken high pitch
  </prosody>
  <prosody rate = "fast">
    This sentence is spoken fast
  </prosody>
  <emphasis level = "strong">
    This sentence is spoken with stress
  </emphasis>
</speak>
```

Controlling TTS systems: eSpeak formant synthesis

eSpeak can be used both for stand-alone formant synthesis and as a front end for Mbrola voices

- `espeak 'text to say' -w test.wav` ⇒ [standard example](#)
- `espeak -v mb-en1 'text to say' | mbrola -e /usr/share/mbrola/en1 - test.wav` ⇒ [Mbrola example](#)
- Free Software (GPL)
- Supports SSML (partially, eg, not `<emphasis>`)
- Many languages, eg, Dutch, Latin, Mandarin, and Cantonese

Assignment: Week 5 TTS

Introduction to eSpeak

- Install eSpeak from <http://espeak.sourceforge.net/>
- Try out short texts using several voices and languages
- Inspect phoneme conversions with *espeak -x*
- Try to improve synthesis by hand-crafting phoneme input using, eg, *espeak -v en "[[D,lz lz sVm f@n'EtIk t'Ekst 'InpUt]]"*
- Try out SSML on eSpeak using, eg, *espeak -m -f example.ssml -w example.wav*
- Describe the differences in quality
- More on Blackboard...

The GNU General Public License I

Version 2, June 1991

Copyright © 1989, 1991 Free Software Foundation, Inc.

51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA

Everyone is permitted to copy and distribute verbatim copies of this license document, but changing it is not allowed.

Preamble

The licenses for most software are designed to take away your freedom to share and change it. By contrast, the GNU General Public License is intended to guarantee your freedom to share and change free software—to make sure the software is free for all its users. This General Public License applies to most of the Free Software Foundation's software and to any other program whose authors commit to using it. (Some other Free Software Foundation software is covered by the GNU Library General Public License instead.) You can apply it to your programs, too.

When we speak of free software, we are referring to freedom, not price. Our General Public Licenses are designed to make sure that you have the freedom to distribute copies of free software (and charge for this service if you wish), that you receive source code or can get it if you want it, that you can change the software or use pieces of it in new free programs; and that you know you can do these things.

To protect your rights, we need to make restrictions that forbid anyone to deny you these rights or to ask you to surrender the rights. These restrictions translate to certain responsibilities for you if you distribute copies of the software, or if you modify it. For example, if you distribute copies of such a program, whether gratis or for a fee, you must give the recipients all the rights that you have. You must make sure that they, too, receive or can get the source code. And you must show them these terms so they know their rights.

We protect your rights with two steps: (1) copyright the software, and (2) offer you this license which gives you legal permission to copy, distribute and/or modify the software.

The GNU General Public License II

Also, for each author's protection and ours, we want to make certain that everyone understands that there is no warranty for this free software. If the software is modified by someone else and passed on, we want its recipients to know that what they have is not the original, so that any problems introduced by others will not reflect on the original authors' reputations.

Finally, any free program is threatened constantly by software patents. We wish to avoid the danger that redistributors of a free program will individually obtain patent licenses, in effect making the program proprietary. To prevent this, we have made it clear that any patent must be licensed for everyone's free use or not licensed at all.

The precise terms and conditions for copying, distribution and modification follow.

TERMS AND CONDITIONS FOR COPYING, DISTRIBUTION AND MODIFICATION

- 0 This License applies to any program or other work which contains a notice placed by the copyright holder saying it may be distributed under the terms of this General Public License. The "Program", below, refers to any such program or work, and a "work based on the Program" means either the Program or any derivative work under copyright law: that is to say, a work containing the Program or a portion of it, either verbatim or with modifications and/or translated into another language. (Hereinafter, translation is included without limitation in the term "modification".) Each licensee is addressed as "you".

Activities other than copying, distribution and modification are not covered by this License; they are outside its scope. The act of running the Program is not restricted, and the output from the Program is covered only if its contents constitute a work based on the Program (independent of having been made by running the Program). Whether that is true depends on what the Program does.

The GNU General Public License III

- 1 You may copy and distribute verbatim copies of the Program's source code as you receive it, in any medium, provided that you conspicuously and appropriately publish on each copy an appropriate copyright notice and disclaimer of warranty; keep intact all the notices that refer to this License and to the absence of any warranty; and give any other recipients of the Program a copy of this License along with the Program.

You may charge a fee for the physical act of transferring a copy, and you may at your option offer warranty protection in exchange for a fee.
- 2 You may modify your copy or copies of the Program or any portion of it, thus forming a work based on the Program, and copy and distribute such modifications or work under the terms of Section 1 above, provided that you also meet all of these conditions:

 - 1 You must cause the modified files to carry prominent notices stating that you changed the files and the date of any change.
 - 2 You must cause any work that you distribute or publish, that in whole or in part contains or is derived from the Program or any part thereof, to be licensed as a whole at no charge to all third parties under the terms of this License.
 - 3 If the modified program normally reads commands interactively when run, you must cause it, when started running for such interactive use in the most ordinary way, to print or display an announcement including an appropriate copyright notice and a notice that there is no warranty (or else, saying that you provide a warranty) and that users may redistribute the program under these conditions, and telling the user how to view a copy of this License. (Exception: if the Program itself is interactive but does not normally print such an announcement, your work based on the Program is not required to print an announcement.)

The GNU General Public License IV

These requirements apply to the modified work as a whole. If identifiable sections of that work are not derived from the Program, and can be reasonably considered independent and separate works in themselves, then this License, and its terms, do not apply to those sections when you distribute them as separate works. But when you distribute the same sections as part of a whole which is a work based on the Program, the distribution of the whole must be on the terms of this License, whose permissions for other licensees extend to the entire whole, and thus to each and every part regardless of who wrote it.

Thus, it is not the intent of this section to claim rights or contest your rights to work written entirely by you; rather, the intent is to exercise the right to control the distribution of derivative or collective works based on the Program.

In addition, mere aggregation of another work not based on the Program with the Program (or with a work based on the Program) on a volume of a storage or distribution medium does not bring the other work under the scope of this License.

- 3 You may copy and distribute the Program (or a work based on it, under Section 2) in object code or executable form under the terms of Sections 1 and 2 above provided that you also do one of the following:
 - 1 Accompany it with the complete corresponding machine-readable source code, which must be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - 2 Accompany it with a written offer, valid for at least three years, to give any third party, for a charge no more than your cost of physically performing source distribution, a complete machine-readable copy of the corresponding source code, to be distributed under the terms of Sections 1 and 2 above on a medium customarily used for software interchange; or,
 - 3 Accompany it with the information you received as to the offer to distribute corresponding source code. (This alternative is allowed only for noncommercial distribution and only if you received the program in object code or executable form with such an offer, in accord with Subsection b above.)

The GNU General Public License V

The source code for a work means the preferred form of the work for making modifications to it. For an executable work, complete source code means all the source code for all modules it contains, plus any associated interface definition files, plus the scripts used to control compilation and installation of the executable. However, as a special exception, the source code distributed need not include anything that is normally distributed (in either source or binary form) with the major components (compiler, kernel, and so on) of the operating system on which the executable runs, unless that component itself accompanies the executable.

If distribution of executable or object code is made by offering access to copy from a designated place, then offering equivalent access to copy the source code from the same place counts as distribution of the source code, even though third parties are not compelled to copy the source along with the object code.

- 4 You may not copy, modify, sublicense, or distribute the Program except as expressly provided under this License. Any attempt otherwise to copy, modify, sublicense or distribute the Program is void, and will automatically terminate your rights under this License. However, parties who have received copies, or rights, from you under this License will not have their licenses terminated so long as such parties remain in full compliance.
- 5 You are not required to accept this License, since you have not signed it. However, nothing else grants you permission to modify or distribute the Program or its derivative works. These actions are prohibited by law if you do not accept this License. Therefore, by modifying or distributing the Program (or any work based on the Program), you indicate your acceptance of this License to do so, and all its terms and conditions for copying, distributing or modifying the Program or works based on it.
- 6 Each time you redistribute the Program (or any work based on the Program), the recipient automatically receives a license from the original licensor to copy, distribute or modify the Program subject to these terms and conditions. You may not impose any further restrictions on the recipients' exercise of the rights granted herein. You are not responsible for enforcing compliance by third parties to this License.

The GNU General Public License VI

- 7 If, as a consequence of a court judgment or allegation of patent infringement or for any other reason (not limited to patent issues), conditions are imposed on you (whether by court order, agreement or otherwise) that contradict the conditions of this License, they do not excuse you from the conditions of this License. If you cannot distribute so as to satisfy simultaneously your obligations under this License and any other pertinent obligations, then as a consequence you may not distribute the Program at all. For example, if a patent license would not permit royalty-free redistribution of the Program by all those who receive copies directly or indirectly through you, then the only way you could satisfy both it and this License would be to refrain entirely from distribution of the Program.
- If any portion of this section is held invalid or unenforceable under any particular circumstance, the balance of the section is intended to apply and the section as a whole is intended to apply in other circumstances.
- It is not the purpose of this section to induce you to infringe any patents or other property right claims or to contest validity of any such claims; this section has the sole purpose of protecting the integrity of the free software distribution system, which is implemented by public license practices. Many people have made generous contributions to the wide range of software distributed through that system in reliance on consistent application of that system; it is up to the author/donor to decide if he or she is willing to distribute software through any other system and a licensee cannot impose that choice.
- This section is intended to make thoroughly clear what is believed to be a consequence of the rest of this License.
- 8 If the distribution and/or use of the Program is restricted in certain countries either by patents or by copyrighted interfaces, the original copyright holder who places the Program under this License may add an explicit geographical distribution limitation excluding those countries, so that distribution is permitted only in or among countries not thus excluded. In such case, this License incorporates the limitation as if written in the body of this License.
- 9 The Free Software Foundation may publish revised and/or new versions of the General Public License from time to time. Such new versions will be similar in spirit to the present version, but may differ in detail to address new problems or concerns.
- Each version is given a distinguishing version number. If the Program specifies a version number of this License which applies to it and "any later version", you have the option of following the terms and conditions either of that version or of any later version published by the Free Software Foundation. If the Program does not specify a version number of this License, you may choose any version ever published by the Free Software Foundation.

The GNU General Public License VII

- 10 If you wish to incorporate parts of the Program into other free programs whose distribution conditions are different, write to the author to ask for permission. For software which is copyrighted by the Free Software Foundation, write to the Free Software Foundation; we sometimes make exceptions for this. Our decision will be guided by the two goals of preserving the free status of all derivatives of our free software and of promoting the sharing and reuse of software generally.

NO WARRANTY

- 11 BECAUSE THE PROGRAM IS LICENSED FREE OF CHARGE, THERE IS NO WARRANTY FOR THE PROGRAM, TO THE EXTENT PERMITTED BY APPLICABLE LAW. EXCEPT WHEN OTHERWISE STATED IN WRITING THE COPYRIGHT HOLDERS AND/OR OTHER PARTIES PROVIDE THE PROGRAM “AS IS” WITHOUT WARRANTY OF ANY KIND, EITHER EXPRESSED OR IMPLIED, INCLUDING, BUT NOT LIMITED TO, THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE. THE ENTIRE RISK AS TO THE QUALITY AND PERFORMANCE OF THE PROGRAM IS WITH YOU. SHOULD THE PROGRAM PROVE DEFECTIVE, YOU ASSUME THE COST OF ALL NECESSARY SERVICING, REPAIR OR CORRECTION.
- 12 IN NO EVENT UNLESS REQUIRED BY APPLICABLE LAW OR AGREED TO IN WRITING WILL ANY COPYRIGHT HOLDER, OR ANY OTHER PARTY WHO MAY MODIFY AND/OR REDISTRIBUTE THE PROGRAM AS PERMITTED ABOVE, BE LIABLE TO YOU FOR DAMAGES, INCLUDING ANY GENERAL, SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES ARISING OUT OF THE USE OR INABILITY TO USE THE PROGRAM (INCLUDING BUT NOT LIMITED TO LOSS OF DATA OR DATA BEING RENDERED INACCURATE OR LOSSES SUSTAINED BY YOU OR THIRD PARTIES OR A FAILURE OF THE PROGRAM TO OPERATE WITH ANY OTHER PROGRAMS), EVEN IF SUCH HOLDER OR OTHER PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES.

END OF TERMS AND CONDITIONS

The GNU General Public License VIII

Appendix: How to Apply These Terms to Your New Programs

If you develop a new program, and you want it to be of the greatest possible use to the public, the best way to achieve this is to make it free software which everyone can redistribute and change under these terms.

To do so, attach the following notices to the program. It is safest to attach them to the start of each source file to most effectively convey the exclusion of warranty; and each file should have at least the "copyright" line and a pointer to where the full notice is found.

one line to give the program's name and a brief idea of what it does.

Copyright (C) yyyy name of author

This program is free software; you can redistribute it and/or modify it under the terms of the GNU General Public License as published by the Free Software Foundation; either version 2 of the License, or (at your option) any later version.

This program is distributed in the hope that it will be useful, but WITHOUT ANY WARRANTY; without even the implied warranty of MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE. See the GNU General Public License for more details.

You should have received a copy of the GNU General Public License along with this program; if not, write to the Free Software Foundation, Inc., 51 Franklin Street, Fifth Floor, Boston, MA 02110-1301, USA.

Also add information on how to contact you by electronic and paper mail.

If the program is interactive, make it output a short notice like this when it starts in an interactive mode:

Gnomovision version 69, Copyright (C) yyyy name of author

Gnomovision comes with ABSOLUTELY NO WARRANTY; for details type 'show w'.

This is free software, and you are welcome to redistribute it under certain conditions; type 'show c' for details.

The GNU General Public License IX

The hypothetical commands `show w` and `show c` should show the appropriate parts of the General Public License. Of course, the commands you use may be called something other than `show w` and `show c`; they could even be mouse-clicks or menu items—whatever suits your program.

You should also get your employer (if you work as a programmer) or your school, if any, to sign a “copyright disclaimer” for the program, if necessary. Here is a sample; alter the names:

*Yoyodyne, Inc., hereby disclaims all copyright interest in the program
'Gnomovision' (which makes passes at compilers) written by James Hacker.
signature of Ty Coon, 1 April 1989
Ty Coon, President of Vice*

This General Public License does not permit incorporating your program into proprietary programs. If your program is a subroutine library, you may consider it more useful to permit linking proprietary applications with the library. If this is what you want to do, use the GNU Library General Public License instead of this License.
